

Comcast Business At Home

One more way we are keeping you and your business connected!

Comcast Business understands that as a business owner, you and your employees may be working away from the office, relying on home internet to be productive. That can create connectivity challenges as increased work demands compete with other family members' requirements for bandwidth.

To help your business and your employees be more productive while working remotely, we created **Comcast Business At Home**. This provides a separate, business grade internet connection in the home, along with additional useful tools.

Comcast Business At Home helps your business and employees by providing:

Reliability

Dedicated, fast, reliable Internet connection with no data caps, safely installed, with optional static IP.

Mobility

On-the-go voice solutions that allow you to route calls from your business number to any device.

Flexibility

No minimum or maximum; add as many employees as you need at different locations.

Security

Cybersecurity solution available to help protect devices connected to the network from malicious threats.

Convenience

Each employee's service is billed to your company's Comcast Business account.

For more information, please contact your Comcast Business representative.
