
COVID 19 RESPONSE SERVICES

As our region plans to reopen there is confusion and frustration among business owners, operators, and educational institutions

What do I need to do to protect my employees? Our customers? Our students?

SERVICES:

Decontamination, disinfection protocol review, training, professional development, and other consulting services are provided by Michael Menz, a Certified Industrial Hygienist and Certified Hazardous Material Manager with 32 years' experience industrial hygiene and environmental consulting. In addition, Mr. Menz has developed dozens of courses and delivered hundreds of presentations in topics such as Right to Know Compliance, Indoor Air Quality assessments, EPA Asbestos Inspection and Management Planning, NIOSH 582 Equivalency, Industrial Hygiene Sampling, Mold Assessor Training, Silica Exposure Assessments, Mercury in Rubberized Gymnasium Flooring Management, Lead-based Paint Inspection and Risk Assessment, Lead Dust Clearance Sampling Hazardous Waste Inventories, and more.

Decontamination/Disinfecting Protocols Review

A Certified Industrial Hygienist will review and make recommendations to your current cleaning and sanitizing protocols (chemicals and frequency) to ensure that they are compliant with the recommendations and guideline from the CDC, OSHA, EPA, Health Departments and state and local agencies.

Onsite or online training can be delivered to your workers if necessary.

Training & Professional Development

COVID 19 – WHAT YOU NEED TO KNOW AND DO.

NEED DIRECTION? You are not alone. Companies are not explicitly required by OSHA or any other agency to have an infectious disease response plan in place, but you should, based on what we are experiencing with COVID 19. But how? This NEW course will help supervisors, managers, and owners take the first step in knowing what is needed to safely continue or reopen operations.

In this training seminar, supervisors and managers will learn what protocols and policies to minimize COVID 19 transmission using best practices and CDC guidelines. A Certified Industrial Hygienist explains how to create a "what to do" plan for close contact and/or casual contact exposure. He provides recommendations and resources to make facility modifications/ identify number of students/ employees in certain areas and ranges, etc. to mitigate risk. Topics include: General Overview of COVID 19, Routes of Transmission, Symptoms, Industrial Hygiene Fundamentals, Risk Exposure Groups, Basic Infection Prevention & Mitigation, Respirators vs. Face Masks, Cleaning & Disinfecting, and Q & A.

Course can be delivered synchronously online or in-person using social distancing guidelines.
